LETTER OF APPROVAL

The project work entitled **"WEB TECHNOLOGY"** submitted to **Trinity International SS & College** by **Mr. Dipesh Yadav**, has been approved as the partial fulfillment of the requirements of the internal evaluation**.**

Date: 04/22/2024   ………………………….

Supervisor's   Signature

Kapil Dhungel

Department Of Computer

Trinity International SS & College

ACKNOWLEDGEMENT

I would like to express our sincere gratitude to everyone who contributed to the development of this project in web technology.

First and foremost, I extend my heartfelt thanks to our instructor, Kapil Dhungel Sir, whose guidance and expertise have been invaluable throughout this journey. Their mentorship and encouragement have inspired us to push our boundaries and explore new horizons in web development.

We are also immensely grateful to our classmates and peers for their collaboration and support. Their insights, feedback, and teamwork have played a significant role in shaping this project into what it is today.

Last but not least, we express our gratitude to the open-source community for providing valuable resources, libraries, and frameworks that facilitated the development process.

TABLE OF CONTENTS

THEORY

- **HTML:**

  HTML, or Hypertext Markup Language, is like the skeleton of a webpage. Just as our bones give shape and structure to our bodies, HTML provides the structure for web content. It uses elements like headings, paragraphs, and lists to organize information. Think of it as a set of building blocks that tell web browsers how to display text, images, links, and other elements on a webpage. With HTML, you can create headings to make text stand out, paragraphs to organize your thoughts, and links to connect different pages together. It's the foundation upon which websites are built, making it essential for anyone looking to create content for the web.

- **CSS:**

  CSS, or Cascading Style Sheets, is like the stylist of a webpage. While HTML provides the structure, CSS adds the style and appearance. It allows you to change things like colors, fonts, spacing, and layout to make your webpage look attractive and visually appealing. With CSS, you can customize the look of elements created with HTML, such as changing the background color, adding borders, creating rounded corners, and even adding animations. CSS works by targeting HTML elements and applying styles to them, either directly or through classes and IDs. It helps you create a consistent and visually pleasing design across your entire website, making it more engaging and user-friendly for visitors.

SYSTEM REQUIREMENTS

Operating system: Windows 10 / 2024

Editor: Visual Studio Code

Hardware: i3 processor, RAM 4 GB, 512 GB HDD

Browser: Chrome

CONCLUSION

In essence, this report has emphasized the importance of HTML and CSS in building websites. HTML organizes content, while CSS styles and arranges it. By learning about basic coding and more advanced design concepts like display:inline; and grid layouts, readers have acquired valuable skills for crafting attractive and adaptable web pages. As the digital world evolves, mastering HTML and CSS remains crucial for developers and designers to keep pace and deliver compelling online content.
